Art Unit: 2852

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn. The amendment filed 3/5/2003 has been entered.

2. Claims 1,2,5,16, and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1,16 and 18, last line, the phrase "after plastic worked" is grammatically awkward.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject

matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2,5, 16 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Hori et al or alternatively is rejected under 35 U.S.C. 103(a) as being obvious over Hori et al.

Hori et al. teach a circular shaped hollow structure comprising a seamless (jointless) metal substrate 2, having a thickness between 20 – 100  $\mu\text{m}$  (0.02 – 0.1 mm) and a Vicker's hardness between 50 and 1500 Hv (preferably 100 - 1200).

Specifically, Hori et al. does not teach the claimed details of manufacturing the photoreceptor's thin conductive support. However, it is well settled in patent law that the patentability of the product does not depend on the method of production. See MPEP 2113.

4. Applicant's arguments with respect to claims 1,2,5,16 and 18 have been considered but are moot in view of the new ground(s) of rejection.

The applicant argues the importance of the limitation "circular-shaped hollow metal structure" however it is noted on page 3, last line – page 4, line 4, this limitation covers both sleeves, pipes and belts. A new reference has been used to teach the hardness of a thin metal layer.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yoda et al., Watanabe, Shibata et al., and Ehara et al. all teach various thickness of a metallic substrate and methods to form the substrate.
